

COMPANY OVERVIEW

Fee management, built for African schools.

SchoolPurse shows a school — live — who has paid, who owes, and prints the receipt the moment money comes in.

schoolpurse.app · Harare, Zimbabwe · June 2026

1 The problem we solve

Most African schools still run fees on a paper receipt book or a drifting spreadsheet. The money is hardest to see exactly when the school is busiest — and that is where fees leak.

- Receipts that are not numbered and cannot be traced.
- Cash and bank totals that never quite agree.
- Arrears invisible until the term is over — too late to recover.

By one industry account, a bursar can take **~3 weeks to produce an outstanding-fees report** — and it is already out of date by the time it lands.

2 What SchoolPurse does

- 1 **Fee items** mapped to classes — tuition, levy, sports, exams, transport.
- 2 **Term invoicing** — every active student billed the right amount in one batch.
- 3 **Record payments** by cash, bank transfer, or mobile money (EcoCash / OneMoney / InnBucks).
- 4 **Instant receipts** — sequential, branded, print or send.
- 5 **Live arrears + collection rate** — who owes, largest first, any day of the term.
- 6 **Roles & isolation** — head sees all, bursar sees finance, teacher sees students; each school's data isolated.

Market & business model

Win Zimbabwe on local fit, then expand across Africa on the same rails.

Beachhead — Zimbabwe

Thousands of fee-charging private, mission, independent and trust schools. WhatsApp-first, USD-invoicing, mobile-money paying.

Expansion — Africa

Hundreds of thousands of schools with the same paper/spreadsheet problem and the same mobile-money rails (Zambia, Malawi, Kenya, Nigeria).

Pricing — SaaS, billed monthly, no setup fee

Plan	Price	Capacity
Starter	\$29 / month	up to 200 students
Standard	\$79 / month	up to 1,000 students
Plus	custom	larger groups & trusts

Priced deliberately below full-ERP tiers: a school recovers the cost in the fees it stops losing in a single untracked term.

Competitive landscape

The market is split between paper/Excel and heavy all-in-one ERPs. [SchoolPurse wins by being narrow on purpose](#) — the focused, affordable, fast-to-adopt fee tool, tuned for Zimbabwe first.

Capability	SchoolPurse	Spreadsheet	Sekani	Genius/ERP	Fedena
Fee focus (not bloated)	Best	–	Partial	ERP	ERP
USD + EcoCash / mobile money	Native	Manual	Yes	Partial	Setup
Instant numbered receipts	Yes	No	Yes	Yes	Yes
Live arrears + collection rate	Yes	No	Yes	Yes	Yes
Low-end Android friendly	Yes	–	Web	Web	Web
Setup time	<30 min	–	Medium	Heavy	Heavy
Entry price	\$29/mo	"free"	On req.	ERP-tier	~\$1k+/yr
Built for Zimbabwe	Yes	–	Yes	Page	No

Why we win

- Does fees deeply, not 50 modules shallowly.
- USD + EcoCash + 3-term + low-end Android, out of the box.
- Usable in under 30 minutes.
- Founder-led and local.

Honest weaknesses

- Not a full ERP (no LMS, exams, HR, attendance).
- Early & small — new brand, growing track record.
- Tracking, not a payment gateway.

Traction, technology & what's next

Status (June 2026)

- Live, billing-ready product.
- Passwordless onboarding & role-based access.
- Two AEO-optimized, citable web pages live.
- Full GTM kit built: promo video, social designs, email + ad copy.

Technology

- Next.js + Supabase (Postgres, RLS).
- Vercel · Cloudflare · Resend · Whop billing.
- Multi-tenant, audit-preserving (payments voided, never hard-deleted).

Roadmap (indicative)

Self-serve term setup

WhatsApp receipt delivery

Mobile-money reconciliation

Multi-currency (ZWG)

Multi-school groups

Second African market

“Stop guessing where your school's fees are. SchoolPurse shows you — live — who has paid, who owes, and prints the receipt the moment money comes in.”
